

ALASTIN Skincare<sup>®</sup> formulates products with TriHex Technology<sup>®</sup>, a proprietary blend of active peptides and botanicals specifically engineered to work with the skin to clear out old collagen and elastin proteins that have been damaged by sun exposure and aging, while supporting the skin's natural ability to produce new collagen and elastin.<sup>2</sup>

## 1. Remove

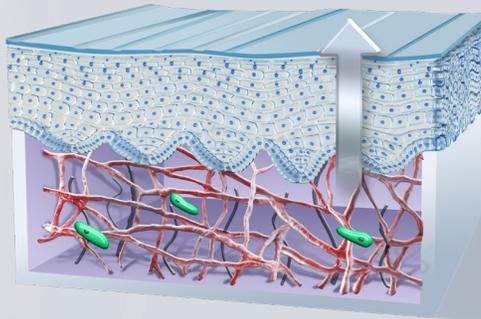

TriHex Technology<sup>®</sup> supports the REMOVAL of aged collagen and elastin to help jump-start the skin's natural rejuvenation process. Collagen and elastin break down and clump together due to photodamage and aging, which can slow down the production of new, healthy collagen and elastin in the deep dermal structure of the skin.

- Damaged skin barrier protection
- Dry and dull-looking skin
- Prone to the appearance of wrinkles, fine lines, and thin skin

## 2. Rebuild

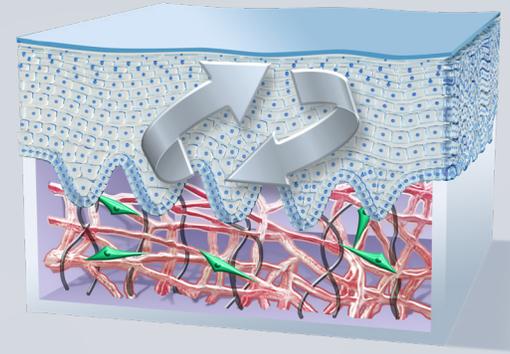

TriHex Technology<sup>®</sup> helps the skin REBUILD healthy collagen and elastin to support visible changes at the surface level. TriHex Technology<sup>®</sup> helps restore the optimal skin environment and create room for new, healthy collagen and elastin by removing the damaged fragments.

- Smoother skin texture
- More hydrated skin
- Enhanced skin elasticity
- Stronger skin barrier to protect against future damage
- Improved appearance of fine lines, wrinkles, and thin skin

## 3. Replenish

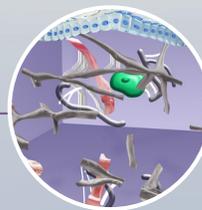

With daily use, TriHex Technology<sup>®</sup> helps to REPLENISH new, healthy collagen and elastin and clear the damaged fragments to maintain healthy skin from the inside out on an ongoing basis.

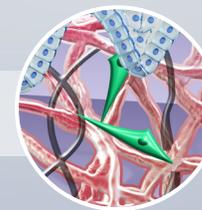

- Daily maintenance with TriHex Technology<sup>®</sup> for ongoing skin rejuvenation
- Helps to maintain healthy skin and a more youthful appearance

## The importance of skin bed preparation

A key differentiator with TriHex Technology<sup>®</sup> is its proprietary recycling mechanism to help REMOVE aged, damaged fragments and restore the optimal environment for new, healthy collagen and elastin.
